| PAT. NO. | Title |
|--------------|--|
| 1 7,171,339 | Method and system for analyzing multi-variate data using canonical decomposition |
| 2 7,166,424 | Fragments of fluorescent proteins for protein fragment complementation assays |
| 3 7,163,273 | Printing cartridge with two dimensional code identification |
| 4 7,155,395 | Preprinted print rolls for postal use in an image processing device |
| 5 7,152,939 | Printing cartridge with switch array identification |
| 6 7,149,320 | Binaural adaptive hearing aid |
| 7 7,144,553 | Use of an array of polymeric sensors of varying thickness for detecting analytes in fluids |
| 8 7,140,726 | Printing cartridge incorporating print media and an internal feed mechanism |
| 9 7,136,716 | Method for providing control to an industrial process using one or more multidimensional variables |
| 10 7,135,616 | Biochemistry-related polynucleotides and polypeptides in plants |
| 11 7,130,454 | Real-time facial recognition and verification system |
| 12 7,129,095 | Method and system for using a weighted response |
| 13 7,128,386 | Printer with capacitive printer cartridge data reader |
| 14 7,127,104 | Vectorized image segmentation via trixel agglomeration |
| 15 7,124,065 | Determining a tangent space and filtering data onto a manifold |
| 16 7,119,836 | Print roll for use in a camera imaging system |
| 17 7,117,188 | Methods of identifying patterns in biological systems and uses thereof |
| 18 7,116,749 | Methods for acquiring multi spectral data of an object |
| 19 7,115,229 | Apparatus and method for monitoring molecular species within a medium |
| 20 7,110,139 | Printhead controller integrated circuit |
| 21 7,109,001 | COBRA gene and uses thereof |

- 22 7,105,301 ▣ Detecting molecular binding by monitoring feedback controlled cantilever deflections
- 23 7,104,958 ▣ Systems and methods for investigating intracranial pressure
- 24 7,100,834 ▣ Method of data distribution using ink dots on cards
- 25 7,097,973 ▣ Method for monitoring molecular species within a medium
- 26 7,097,104 ▣ Image manipulation device
- 27 7,092,011 ▣ Camera for printing on media provided on print roll
- 28 7,089,780 ▣ Apparatus, systems and methods for detecting and transmitting sensory data over a computer network
- 29 7,087,896 ▣ Mass spectrometric quantification of chemical mixture components
- 30 7,084,951 ▣ Combined media- and ink-supply cartridge
- 31 7,083,108 ▣ Redundantly encoded data structure for encoding a surface
- 32 7,073,713 ▣ Card having coded data and visible information, for operating a device
- 33 7,072,770 ▣ Method for identifying components of a mixture via spectral analysis
- 34 7,068,842 ▣ System and method for object identification and behavior characterization using video analysis
- 35 7,062,504 ▣ Creating ensembles of oblique decision trees with evolutionary algorithms and sampling
- 36 7,062,385 ▣ Intelligent electro-optical nucleic acid-based sensor array and method for detecting volatile compounds in ambient air
- 37 7,057,721 ▣ Wide field method for detecting pathogenic microorganisms
- 38 7,055,927 ▣ Method of identifying printing cartridge characteristics with capacitive sensors
- 39 7,054,792 ▣ Method, computer program, and system for intrinsic timescale decomposition, filtering, and automated analysis of signals of arbitrary origin or timescale
- 40 7,054,468 ▣ Face recognition using kernel fisherfaces
- 41 7,052,103 ▣ Printing device for use with a printing cartridge having capacitive sensor identification
- 42 7,050,143 ▣ Camera system with computer language interpreter
- 43 7,044,589 ▣ Printing cartridge with barcode identification
- 44 7,041,063 ▣ Noninvasive measurement of chemical substances
- 45 7,039,621 ▣ System, method, and computer program product for representing object relationships in a multidimensional space
- 46 7,039,446 ▣ Indirect measurement of tissue analytes through tissue properties
- 47 7,033,781 ▣ Whole cell engineering by mutagenizing a substantial portion of a starting genome, combining mutations, and optionally repeating
- 48 7,031,778 ▣ Temporary expanding integrated monitoring network
- 49 7,026,121 ▣ Methods and compositions for diagnosing and monitoring transplant rejection
- 50 7,024,312 ▣ Methods for making character strings, polynucleotides and polypeptides having desired characteristics

- 68 6,975,944 **TI** Method and apparatus for monitoring materials used in electronics
- 69 6,973,158 **TI** Multi-target X-ray tube for dynamic multi-spectral limited-angle CT imaging
- 70 6,965,816 **TI** PFN/TRAC system FAA upgrades for accountable remote and robotics control to stop the unauthorized use of aircraft and to improve equipment management and public safety in transportation
- 71 6,961,636 **TI** Method and apparatus for dynamically monitoring controller tuning parameters
- 72 6,956,961 **TI** Extracting shape information contained in cell images
- 73 6,954,722 **TI** Methods and systems for data analysis
- 74 6,954,254 **TI** Printing cartridge with ink and print media supplies
- 75 6,953,663 **TI** Polymorphism detection
- 76 6,953,235 **TI** Printing cartridge with a data-carrying integrated circuit device
- 77 6,950,493 **TI** Dynamic multi-spectral CT imaging
- 78 6,950,492 **TI** Dynamic multi-spectral X-ray projection imaging
- 79 6,948,661 **TI** Data structure encoded on a surface of an object
- 80 6,941,287 **TI** Distributed hierarchical evolutionary modeling and visualization of empirical data
- 81 6,919,566 **TI** Method of calibrating a spectroscopic device
- 82 6,918,542 **TI** Data distribution mechanism in the form of ink dots on cards
- 83 6,917,952 **TI** Application-specific method and apparatus for assessing similarity between two data objects
- 84 6,917,845 **TI** Method for monitoring environmental condition using a mathematical model
- 85 6,913,930 **TI** Analytical method and apparatus therefor involving continuous titration
- 86 6,907,436 **TI** Method for classifying data using clustering and classification algorithm supervised
- 87 6,907,369 **TI** Method and apparatus for modifying design constraints based on observed performance
- 88 6,907,280 **TI** Method and apparatus for objectively measuring pain, pain treatment and other related techniques
- 89 6,883,364 **TI** Portable sensor
- 90 6,882,992 **TI** Neural networks for intelligent control
- 91 6,882,990 **TI** Methods of identifying biological patterns using multiple data sets
- 92 6,879,729 **TI** Parallel object-oriented, denoising system using wavelet multiresolution analysis
- 93 6,879,341 **TI** Digital camera system containing a VLIW vector processor
- 94 6,876,760 **TI** Classifying cells based on information contained in cell images
- 95 6,874,364 **TI** System for monitoring mechanical waves from a moving machine
- 96 6,865,509 **TI** System for providing control to an industrial process using one or more multidimensional variables
- 97 6,857,719 **TI** Printing cartridge with pressure sensor array identification
- 98 6,853,920 **TI** Control for an industrial process using one or more multidimensional variables
- 99 6,850,274 **TI** Image texture mapping camera
- 100 6,839,636 **TI** Multiple sensing system and device

| 160 6,546,378 | Signal interpretation engine |
| 161 6,544,193 | Noninvasive measurement of chemical substances |
| 162 6,542,645 | Adaptive tracking of dots in optical storage system using ink dots |
| 163 6,537,211 | Flourescence imaging endoscope |
| 164 6,503,719 | Methods and apparatus for detecting polynucleotide hybridization |
| 165 6,496,813 | Classifying apparatus using a combination of statistical methods and neuronal networks, designed in particular for odour recognition |
| 166 6,495,341 | Method and apparatus for monitoring a physical or chemical conversion of a grain material |
| 167 RE37,933 | Viral vectors and their use for treating hyperproliferative disorders, in particular restenosis |

- 168 6,493,637 **▣** Coincidence detection method, products and apparatus
169 6,476,863 **▣** Image transformation means including user interface
170 6,459,495 **▣** Dot center tracking in optical storage systems using ink dots
171 6,453,246 **▣** System, method, and computer program product for representing proximity data in a multi-dimensional space
172 6,450,008 **▣** Food applications of artificial olfactometry
173 6,442,525 **▣** System for authenticating physical objects
174 6,438,409 **▣** Methods of characterizing ventricular operations and applications thereof
175 6,431,669 **▣** Method and apparatus for information storage in a portable print roll
176 6,424,859 **▣** Diagnosis of rheumatoid arthritis in vivo using a novel spectroscopic approach
177 6,422,061 **▣** Apparatus, systems and methods for detecting and transmitting sensory data over a computer network
178 6,421,614 **▣** Photometer system for obtaining reliable data
179 6,419,361 **▣** Spectral bio-imaging of the eye
180 6,418,783 **▣** Handheld sensing apparatus
181 6,416,154 **▣** Printing cartridge with two dimensional code identification
182 6,415,054 **▣** Target detection for dot region alignment in optical storage systems using ink dots
183 6,410,254 **▣** Compositions and assays utilizing ADP or phosphate for detecting protein modulators
184 6,405,065 **▣** Non-invasive in vivo tissue classification using near-infrared measurements
185 6,403,089 **▣** Methods of modulating immune coagulation
186 6,400,828 **▣** Canonical correlation analysis of image/control-point location coupling for the automatic location of control points
187 6,387,329 **▣** Use of an array of polymeric sensors of varying thickness for detecting analytes in fluids
188 6,379,929 **▣** Chip-based isothermal amplification devices and methods
189 6,362,869 **▣** Authentication system for camera print rolls
190 6,362,868 **▣** Print media roll and ink replaceable cartridge
191 6,356,715 **▣** Prints remaining indicating for camera with variable length print capability
192 6,341,629 **▣** Testing device and method of use
193 6,339,950 **▣** Process for determining the number of components in peaks, bands, and signals of chromatograms, electrograms, and spectrograms
194 6,333,501 **▣** Methods, apparatus, and articles of manufacture for performing spectral calibration
195 6,317,192 **▣** Utilization of image tiling effects in photographs
196 6,315,200 **▣** Encoded data card reading system
197 6,300,063 **▣** Polymorphism detection
198 6,297,018 **▣** Methods and apparatus for detecting nucleic acid polymorphisms
199 6,276,798 **▣** Spectral bio-imaging of the eye

Title

- 201 6,236,047 **T** Method for multi-spectral analysis of organic blood analytes in noninvasive infrared spectroscopy
- 202 6,234,006 **T** Handheld sensing apparatus
- 203 6,223,133 **T** Method for optimizing multivariate calibrations
- 204 6,217,165 **T** Ink and media cartridge with axial ink chambers
- 205 6,212,824 **T** Methods for classifying plants for evaluation and breeding programs by use of remote sensing and image analysis technology
- 206 6,200,798 **T** Defective recombinant adenoviruses with inactivated IVa2 gene
- 207 6,198,532 **T** Spectral bio-imaging of the eye
- 208 6,146,897 **T** Method for the detection of cellular abnormalities using Fourier transform infrared spectroscopy
- 209 6,122,042 **T** Devices and methods for optically identifying characteristics of material objects
- 210 6,103,199 **T** Capillary electroflow apparatus and method
- 211 6,085,576 **T** Handheld sensing apparatus
- 212 6,066,459 **T** Method for simultaneous detection of multiple fluorophores for in situ hybridization and multicolor chromosome painting and banding
- 213 6,055,325 **T** Color display of chromosomes or portions of chromosomes
- 214 6,051,559 **T** Cloning and characterizing of genes associated with long-term memory
- 215 6,040,578 **T** Method and apparatus for multi-spectral analysis of organic blood analytes in noninvasive infrared spectroscopy
- 216 6,035,246 **T** Method for identifying known materials within a mixture of unknowns
- 217 6,018,587 **T** Method for remote sensing analysis by decorrelation statistical analysis and hardware therefor
- 218 6,017,390 **T** Growth of oriented crystals at polymerized membranes

- 219 6,015,667 Method for multicomponent analysis method including the determination of a statistical confidence interval
- 220 5,945,676 Method and apparatus for multi-spectral analysis in noninvasive NIR spectroscopy
- 221 5,936,731 Method for simultaneous detection of multiple fluorophores for in situ hybridization and chromosome painting
- 222 5,931,779 Real-time in-vivo measurement of myoglobin oxygen saturation
- 223 5,926,773 System for identifying known materials within a mixture of unknowns
- 224 5,912,165 Method for chromosome classification by decorrelation statistical analysis and hardware therefore
- 225 5,906,919 Method for chromosomes classification
- 226 5,871,946 Method for determining activity of enzymes in metabolically active whole cells
- 227 5,871,908 Process for the determination of in vitro amplified nucleic acids
- 228 5,857,462 Systematic wavelength selection for improved multivariate spectral analysis
- 229 5,851,521 Viral vectors and their use for treating hyperproliferative disorders, in particular restenosis
- 230 5,849,513 Assay reagent
- 231 5,834,203 Method for classification of pixels into groups according to their spectra using a plurality of wide band filters and hardware therefore
- 232 5,822,742 Dynamically stable associative learning neural network system
- 233 5,817,462 Method for simultaneous detection of multiple fluorophores for in situ hybridization and multicolor chromosome painting and banding
- 234 5,812,930 Information handling systems with broadband and narrowband communication channels between repository and display systems
- 235 5,804,203 Topical product formulations containing strontium for reducing skin irritation
- 236 5,798,262 Method for chromosomes classification
- 237 5,784,162 Spectral bio-imaging methods for biological research, medical diagnostics and therapy
- 238 5,776,720 Assay reagent
- 239 5,764,819 Methods for classifying plants for evaluation and breeding programs by use of remote sensing and image analysis technology
- 240 5,752,007 System and method using separators for developing training records for use in creating an empirical model of a process
- 241 5,747,806 Method and apparatus for multi-spectral analysis in noninvasive nir spectroscopy
- 242 5,733,719 Method of making an assay compound

1 **Real-world applications: papers: Evolutionary optimization of ZIP60: a controlled explosion in hyperspace**

Dave Cliff

July 2006 **Proceedings of the 8th annual conference on Genetic and evolutionary computation GECCO '06**

Publisher: ACM Press

Full text available: ☒ pdf(346.20 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The "ZIP" adaptive trading algorithm has been demonstrated to outperform human traders in experimental studies of continuous double auction (CDA) markets. The original ZIP algorithm requires the values of eight control parameters to be set correctly. A new extension of the ZIP algorithm, called ZIP60, requires the values of 60 parameters to be set correctly. ZIP60 is shown here to produce significantly better results than the original ZIP (called "ZIP8" hereafter). A genetic algorithm (GA) is us ...

Keywords: ZIP8 ZIP60, Zero-Intelligence-Plus (ZIP) Traders, algorithmic trading, auction markets, automated market-mechanism design

2 **Real world applications: Nonlinear feature extraction using a neuro genetic hybrid**

Yung-Keun Kwon, Byung-Ro Moon

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: ☒ pdf(361.05 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Feature extraction is a process that extracts salient features from observed variables. It is considered a promising alternative to overcome the problems of weight and structure optimization in artificial neural networks. There were many nonlinear feature extraction methods using neural networks but they still have the same difficulties arisen from the fixed network topology. In this paper, we propose a novel combination of genetic algorithm and feedforward neural networks for nonlinear feature ...

Keywords: feature extraction, function approximation, neuro-genetic hybrid

3 **Evolvable hardware: papers: Evolutionary design of fault-tolerant analog control for a piezoelectric pipe-crawling robot**

Geoffrey A. Hollinger, David A. Gwaltney

July 2006 **Proceedings of the 8th annual conference on Genetic and evolutionary**

computation GECCO '06

Publisher: ACM Press

Full text available: [pdf\(418.13 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this paper, a genetic algorithm (GA) is used to design fault-tolerant analog controllers for a piezoelectric micro-robot. First-order and second-order functions are developed to model the robot's piezoelectric actuators, and the GA is used to evolve closed-loop controllers for both models. The GA is first used to assist in traditional PID design and is later used to synthesize variable topology analog controllers. Through the use of a compact circuit representation, runtimes are minimized and ...

Keywords: evolvable hardware, genetic algorithms, inspection robots, piezoelectric actuators, robot control

4 Genetic programming: Open-ended robust design of analog filters using genetic programming

Jianjun Hu, Xiwei Zhong, Erik D. Goodman

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: [pdf\(653.64 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Most existing research on robust design using evolutionary algorithms (EA) follows the paradigm of traditional robust design, in which parameters of a design solution are tuned to improve the robustness of the system. However, the topological structure of a system may set a limit on the possible robustness achievable through parameter tuning. This paper proposes a new robust design paradigm that exploits the open-ended topological synthesis capability of genetic programming to evolve more robust ...

Keywords: analog filter synthesis, automated design, bond graphs, genetic programming, robust design

5 Poster session: FPGA-based design of an evolutionary controller for collision-free robot navigation

M. A. H. B. Azhar, K. R. Dimond

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

The employment of field programmable gate arrays (FPGAs) to a robot controller is very attractive, since it allows for fast IC prototyping and low cost modifications. The speedup is achieved because of pipelining and dedicated functions in hardware that are customized to the problem. The self learning ability and the adaptive nature of an Artificial Neural Network (ANN) makes it a good candidate for the control structure of a robot's navigation. An evolutionary approach in designing robots can e ...

6 Poster session: A single-FPGA implementation of image connected component labelling

K. Benkrid, S. Sukhsawas, D. Crookes, S. Belkacemi

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

This paper describes an architecture based on a serial iterative algorithm for Image Connected Component Labelling with a hardware complexity $O(N)$ for an $N \times N$ image. The algorithm iteratively scans the input image, performing a recursive non-zero maximum neighbourhood operation. A complete forward pass is followed by an inverse pass in which

the image is scanned in reverse order. The process is repeated until no change in the image occurs. The algorithm has been coded in Handel C language and tar ...

7 Contributed articles: Genetic subtyping using cluster analysis

Tom Burr, James R. Gattiker, Gregory S. LaBerge

July 2001 **ACM SIGKDD Explorations Newsletter**, Volume 3 Issue 1

Publisher: ACM Press

Full text available: [pdf\(984.40 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper we (1) describe state-of-the-art methods to identify clusters in DNA sequence data for taxonomic analysis; (2) describe a new method with better scaling properties based on model-based clustering, and (3) present examples using the nucleoprotein and hemagglutinin regions of influenza and the *env* and *gag* regions of human immunodeficiency virus (HIV).

Keywords: DNA sequence analysis, HIV, influenza, model-based clustering, phylogenetic trees

8 Genetic algorithms: On favoring positive correlations between form and quality of candidate solutions via the emergence of genomic self-similarity

Ivan Garibay, Annie S. Wu, Ozlem Garibay

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: [pdf\(240.49 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A key property for the effectiveness of stochastic search techniques, including evolutionary algorithms, is the existence of a positive correlation between the form and the quality of candidate solutions. In this paper, we show that when the ordering of genomic symbols in a genetic algorithm is completely independent of the fitness function and therefore free to evolve along the candidate solutions it encodes, the resulting genomes self-organize into self-similar structures that favor this key s ...

9 Learning Classifier systems and other genetics-based machine learning: papers:

Prediction update algorithms for XCSF: RLS, Kalman filter, and gain adaptation

Pier Luca Lanzi, Daniele Loiacono, Stewart W. Wilson, David E. Goldberg

July 2006 **Proceedings of the 8th annual conference on Genetic and evolutionary computation GECCO '06**

Publisher: ACM Press

Full text available: [pdf\(189.57 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We study how different prediction update algorithms influence the performance of XCSF. We consider three classical parameter estimation algorithms (NLMS, RLS, and Kalman filter) and four gain-adaptation algorithms (K1, K2, IDBD, and IDD). The latter have been shown to perform comparably to the best algorithms (RLS and Kalman), but they have a lower complexity. We apply these algorithms to update classifier prediction in XCSF and compare the performances of the seven versions of XCSF on a set of ...

Keywords: Kalman filter, LCS, XCS, prediction update

10 Crowd and group animation

Daniel Thalmann, Christophe Hery, Seth Lippman, Hiromi Ono, Stephen Regelous, Douglas Sutton

August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

Publisher: ACM Press

Full text available: [pdf\(20.19 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A continuous challenge for special effects in movies is the production of realistic virtual crowds, in terms of rendering and behavior. This course will present state-of-the-art techniques and methods. The course will explain in details the different approaches to create virtual crowds: particle systems with flocking techniques using attraction and repulsion forces, copy and pasting techniques, agent-based methods. The architecture of software tools will be presented including the MASSIVE software ...

11 Evolutionary hardware: Evolving analog controllers for correcting thermoacoustic instability in real hardware

Saranyan A. Vigham, John C. Gallagher, Sanjay K. Boddhu

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: [pdf\(566.93 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Previous research demonstrated that Evolvable Hardware (EH) techniques can be employed to suppress Thermoacoustic (TA) instability in a computer simulated combustion chamber. Though that work established basic feasibility, there were still significant questions concerning whether those techniques would function in the real world. This paper presents the results of the next incremental step between controlling in pure simulation and controlling a real combustion chamber. In it, we will examine is ...

Keywords: evolvable hardware

12 On genetic algorithms

Eric B. Baum, Dan Boneh, Charles Garrett

July 1995 **Proceedings of the eighth annual conference on Computational learning theory COLT '95**

Publisher: ACM Press

Full text available: [pdf\(1.13 MB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

13 Poster session: A SC-based novel configurable analog cell

Binlin Guo, Jiarong Tong

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

This paper presents a high performance Configurable Analog Cell (CAC) which is made up of a Basic Configurable Analog Cell (BCAC) and a digital converter block. The CAC can be used either for Field Programmable Analog Array (FPAA) or for Field Programmable Digital-Analog Mixed Array (FPMA). The BCAC include three innovative Programmable Switch Blocks (PSBs), three Programmable Capacitor Arrays (PCAs), and an amplifier. PSB and PCA can be programmed to generate many equivalent components. In addi ...

14 Poster session: Testing for bit error rate in FPGA communication interfaces

Yongquan Fan, Zeljko Zilic

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

FPGAs have witnessed an increased use of dedicated communication interfaces. With their increased use, it is becoming critical to test and properly characterize all such interfaces.

Bit error rate (BER) characteristic is one of the basic measures of the performance of any digital communication system. We propose a scheme for BER testing in FPGAs, which exhibits a few orders of magnitude speedup compared to traditional software simulation methods. In this scheme, we include a novel implementation ...

15 **Poster session: An FPGA architecture with built-in error correction capability**

 P. K. Lala, B. Kiran Kumar
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

The use of very deep submicron technology makes VLSI-based digital systems more susceptible to transient or soft errors, and thus compromises their reliability. This paper proposes an FPGA architecture inspired by the human immune system that allows tolerance of transient errors. The architecture is composed of a two-dimensional array of identical functional cells with different genetic codes. These codes are chosen based on the required functions to be performed by the functional cells. An error ...

16 **Poster session: FPGAs in critical hardware/software systems**

 Adrian J. Hilton J. Adrian J. Hilton, Gemma Townson, Jon G. Hall
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

FPGAs are being used in increasingly complex roles in critical systems, interacting with conventional critical software. Established safety standards require rigorous justification of safety and correctness of the conventional software in such systems. Newer standards now make similar requirements for safety-related electronic hardware, such as FPGAs, in these systems. In this paper we examine the current state-of-the-art in programming FPGAs, and their use in conventional (low-criticality) hard ...

17 **Poster session: Design framework for the implementation of the 2-D orthogonal discrete wavelet transform on FPGA**

 A. Benkrid, D. Crookes, K. Benkrid
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#), [citations](#)

This paper gives a design framework for the implementation of the 2-D Orthogonal Discrete Wavelet Transform (DWT) on FPGA. The architecture is based on the Pyramid Algorithm Analysis. Our architecture spatially maps the multistage filter banks of the DWT onto the Xilinx Virtex-E FPGA family. In this paper we propose a novel FIR structure to handle the computation along the borders using symmetric extension. The paper includes a new detailed mathematical approach to determine the architecture's d ...

18 **Poster session: Lattice adaptive filter implementation for FPGA**

 Zdenek Pohl, Rudolf Matoušek, Jirí Kadlec, Milan Tichý, Miroslav Licko
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

Our poster introduces an innovative RLS Lattice filter implementation for FPGAs. The signal processing applications typically require wide numeric range, and that poses a problem when using an FPGA implementation. Our approach is based on arithmetic using logarithmic numeric representation (LNS). The test application - an adaptive noise canceller - has been optimized for the Xilinx Virtex devices. It consumes roughly 70% of all logic resources of the XCV800 device and all block memory cells. The ...

19 **Poster session: A high-speed successive erasure BCH decoder architecture**

Thomas Buerner

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

A new high speed architecture for a BCH successive erasure decoder is presented. The Berlekamp-Massey based decoder by Sarwate and Shanbhag is extended to handle successive erasures. The critical path in the calculation submodules is increased from $T_{add} + T_{mult}$ to $T_{add} + T_{mult} + T_{mux}$. The proposed architecture is implemented exemplary for a BCH(63,45,7) code with up to two erasures on a XILINX Spartan2E300-7. Thus a clock frequency of 95 MHz is reached using 47% of the available slices instead of 105 ...

20 **Poster session: A physical retiming algorithm for field programmable gate arrays (abstract only)**

Peter Suaris, Dongsheng Wang, Pei-Ning Guo, Nan-Chi Chou

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

In this paper, we present a physical retiming algorithm for sequential circuits implemented in field programmable gate arrays (FPGAs). This algorithm can speed up the sequential circuits by reducing delay of all critical paths with negative slacks. By taking advantage of the physical information provided by placed circuits, this algorithm integrates two operations: retiming and register duplication. Retiming moves registers across combinational components. Register duplication moves registers ac ...

21 [Poster session: An estimation and exploration methodology from system-level specifications: application to FPGAs](#)

Sebastien Bilavarn, Guy Gogniat, Jean Luc Philippe

 February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

 Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#)

Rapid evaluation and design space exploration from early specifications are important issues in the design cycle. We propose an original area vs. delay estimation methodology that targets reconfigurable architectures. Two main steps compose the estimation flow: i) structural estimations where architectural solutions are defined at the RT level, this step is technological independent and performs an automatic design space exploration and ii) physical estimations which perform technology mapping t ...

22 [Introduction & overview of "artificial life"—evolving intelligent agents for modeling & simulation](#)

A. Martin Wildberger

 November 1996 **Proceedings of the 28th conference on Winter simulation WSC '96**

Publisher: ACM Press, IEEE Computer Society

 Full text available: [pdf\(987.66 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

"Artificial Life," despite its biological analogy and the hyperbole that its name implies, is really a collection of methods for building discrete event simulations with evolving multiple agents. It consists mainly of representing parts of systems or natural phenomena as individual active objects that may be both persistent and self-modifiable, operating on them with genetic algorithms or other evolutionary computing techniques and treating their multi-dimensional parameter (state) space discret ...

 Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

The low operating speed of current CMOS Field Programmable Gate Arrays (FPGAs), i.e., 10-220 MHz, has prevented their use in high-speed digital applications. With the advent of IBM Silicon Germanium (SiGe) 7HP technology, designers have been able to design FPGAs

operating in the gigahertz range. This paper is going to elaborate on the implementation of a 4-bit ripple-carry full adder (FA) on the new SiGe FPGA with new architectures and a novel power management strategy. The 1-bit FA can be reali ...

24 **Poster session: A high resolution diagnosis technique for open and short defects in**

FPGA interconnects.

Mehdi Baradaran Tahoori

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

A two-step diagnosis flow, coarse-grain and fine-grain, is presented in order to identify a faulty element in the FPGA interconnects. The fault models used for interconnect are open, resistive-open, and bridging fault. The coarse-grain phase identifies the faulty net, the routing between two consecutive sequential elements in the FPGA. This phase is performed by just post-processing tester results for the test configurations used for interconnect testing. During the fine-grain step, the faulty n ...

25 **Poster session: Application-dependent testing of FPGAs for bridging faults**

Mehdi Baradaran Tahoori

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

A new technique is presented for testing for bridging faults in the interconnects of an arbitrary design implemented in an FPGA. The configuration of the routing resources used in the original design remains unchanged in the test configurations. Only the logic blocks used in the design are reprogrammed in order to implement single-term functions, logic functions with only one minterm or one maxterm. As shown by formal proofs, all activated faults are detected when single-term functions and appro ...

26 **Poster session: Design strategies and modified descriptions to optimize cipher FPGA**

implementations: fast and compact results for DES and triple-DES

Gaël Rouvroy, Francois-Xavier Standaert, Jean-Jacques Quisquater, Jean-Didier Legat

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#)

We propose a new mathematical DES description that allows optimized implementations. It also provides the best DES and triple-DES FPGA implementations known in term of ratio throughput/area, where area means the number of FPGA slices used. First, we get a less resource consuming unrolled DES implementation that works at data rates of 21.3 Gbps (333 MHz), using VIRTEX II technology. In this design, the plaintext, the key and the mode (encryption/decryption) can be changed on a cycle-by-cycle basis ...

27 **Poster session: Wireless sensor networks: a power-scalable motion estimation IP for**

hybrid video coding

Federico Quaglio, Maurizio Martina, Fabrizio Vacca, Guido Masera, Andrea Molino, Gianluca Piccinini, Maurizio Zamboni

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

Wireless Sensor Networks are an emerging phenomenon in the research community. The design and development of network architectures and nodes implementation are fostering many research activities. Due to their wide application fields and pervasive employment possibilities, the investigation of novel classes of wireless sensor nodes is of great concern.

In this paper we presented a novel Power-Scalable Motion Estimation IP suitable for video-surveillance over Wireless Sensor Networks. The proposed ...

28 Poster session: Synthetic circuit generation using clustering and iteration

 Paul D. Kundarewich, Jonathan Rose

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

The development of next-generation CAD tools and FPGA architectures requires benchmark circuits to experiment with new algorithms and architectures. There has always been a shortage of good public benchmarks for these purposes, and even companies that have access to proprietary customer designs could benefit from designs that meet size and other particular specifications. In this paper, we present a new method of generating realistic synthetic benchmark circuits to help alleviate this shortage. ...

29 Poster session: Reconfigurable randomized K-way graph partitioning

 Fatih Kocan

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

In this paper, a randomized k-way graph partitioning algorithm is mapped onto reconfigurable hardware. The randomized algorithm relies on repetitive running of the same algorithm with different random number sequences to achieve the (near-)optimal solution. The run-time and hardware requirements of this reconfigurable solution per a random number sequence are $O(|V|-K)$ cycles and $O(|V|\log|V|+|E|)$ gates and flip-flops, respectively. Performance is improved further at the expense of more hardware b ...

30 Poster session: An automated and power-aware framework for utilization of IP cores in hardware generated from C descriptions targeting FPGAs

 Alex Jones, Prith Banerjee

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

Use of hand optimized Intellectual Property (IP) logic cores is prolific in hardware design. While IP cores remain a standard way to utilize the improvement in FPGA technology and contend with time to market pressure through reuse, popularity of tools generating hardware descriptions from high-level languages is also increasing in popularity. PACT HDL combines these two methods within a power-aware framework. The PACT HDL compiler generates power-optimized VHDL/Verilog from a C language descript ...

31 Poster session: Power-aware architectures and circuits for FPGA-based signal processing

 Frank Honoré, Ben Calhoun, Anantha Chandrakasan

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available:  pdf(187.05 KB) Additional Information: [full citation](#), [abstract](#)

This work showcases a power-aware system design methodology for DSP applications on reconfigurable hardware platforms. In particular, an enhanced FPGA architecture is proposed and analyzed for a deep submicron process technology. These enhancements reduce Configurable Logic Block (CLB) usage for distributed arithmetic implementations of signal processing applications by 50% or more thereby reducing the load on interconnect resources. Multi-Threshold CMOS (MTCMOS) circuit design techniques are ag ...

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#)

The idea of managing the comprising computations of an application executed in an FPGA-based system is presented. An efficient algorithm for exploiting the timing slack of building blocks of the application is proposed. The slack of these blocks can be utilized by replacing them with slower but "cheaper" modules and by assigning the computations to the proper resources. Thus, our approach manages the comprising computations and system resources at the same time. This is performed without comprom ...

33 **Poster session: On hiding latency in reconfigurable systems: the case of merge-sort for an FPGA-based system**

Hossam ElGindy, George Ferizis
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

Recursive solutions are effective software techniques that are difficult to map into hardware due to their dependency on input size and data values. As a result, most high-level design tools do not allow for recursive calls. In this paper we present a technique for mapping the merge-sort algorithm, as a case study, into a reconfigurable system. Our mapping employs an on-line prediction method to reconfigure the necessary hardware only when the need arises, and to hide the reconfiguration delay. ...

Pedro C. Diniz, Joonseok Park
February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

FPGAs have appealing features such as customizable internal and external bandwidth and the ability to exploit vast amounts of fine-grain instruction-level parallelism. In this paper we explore the applicability of these features in using FPGAs as data search and reorganization engines for performing search and reorganization computations over spatial pointer-based data structures for which traditional computing platforms perform poorly. The preliminary experiments, for a set of simple spatial qu ...

35 **Poster session: Recursive circuit clustering for minimum delay and area**

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

We present an effective recursive algorithm for circuit clustering for delay and area minimization, which is applicable to FPGAs. At the highest level of clustering, the circuit is clustered using a modified single-level clustering algorithm. A cluster to netlist transformation technique is proposed, which converts each cluster into a new subcircuit. The algorithm then continues recursively by clustering the generated subcircuits into further levels of clusters. To reduce the amount of node dupl ...

routability

Katherine Compton, Scott Hauck

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

The design of a routing channel for an FPGA is a complex process, requiring the careful balance of flexibility with silicon efficiency. With the growing move towards embedding FPGAs into SoC designs, and the opportunity to automatically generate FPGA architectures, this problem becomes even more critical. The design of a routing channel requires determining the number of routing tracks, the length of the wires in those tracks, and the positioning of the breaks on the tracks. This paper focuses o ...

37 Poster session: Implementation of digital fixed-point approximations to continuous-time IIR filters

J. E. Carletta, R. J. Veillette, F. W. Krach, Z. Fang

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf\(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

An analytical framework for the implementation of digital infinite impulse response filters in fixed-point hardware on FPGAs is presented. It presumes that a continuous-time filter with the desired response is given. Within the framework, the constant coefficient bit widths are determined by accounting for the sensitivity of the filter's pole and zero locations with respect to the coefficient perturbations. The internal signal bit widths are determined by calculating theoretical bounds on the ra ...

38 Poster session: Customized regular channel design in FPGAs

February 2003 **Proceedings of the 2003 ACM/SIGDA eleventh international symposium on Field programmable gate arrays FPGA '03**

Publisher: ACM Press

Full text available: [pdf \(187.05 KB\)](#) Additional Information: [full citation](#), [abstract](#)

Field-programmable logic has become an increasingly important technology for the design of digital circuits. One interesting point in the field of reconfigurable logic is its classification within the implementation space of other technologies. Such a classification gains importance if FPGA technology becomes an integral part of Systems-on-a-Chip (SoC). The poster discusses an approach to classify technologies based on their granularity. Therefore, a new distinction into homogeneous and heteroge ...

This paper presents a novel approach to hardware abstraction based on the logic programming language Prolog. This is an attempt to satisfy the dual requirement of abstract hardware design and hardware efficiency. Central to this approach is a hardware description environment called HIDE, which provides more abstract hardware descriptions and compositions than are possible in traditional hardware description languages such as VHDL or Verilog. HIDE enables highly scaleable and parameterised compos ...

Applications such as digital cell phones, 3G wireless receivers, and voice over IP, require DSP functions that are typically mapped onto general purpose DSP processors. With the introduction of advanced FPGA architectures which provide built-in DSP support such as the Xilinx Virtex-II, and the Altera Stratix, a new hardware alternative is available for DSP designers. DSP design has traditionally been divided into algorithm development and hardware/software implementation. The majority of DSP alg ...

In code division multiple access (CDMA) systems the base station identifies each user in a cell by unique orthogonal (Walsh) codes. The Walsh codes are generated at the transmitter using a Walsh-Hadamard function. A Fast Hadamard Transformer (FHT) is used at the receiver to decode the transmitted codes. The purpose of this study is to design a FHT which utilizes less hardware resources as compared to the existing designs and also

44 Discovering Gene Networks with a Neural-Genetic Hybrid

Edward Keedwell, Ajit Narayanan

July 2005 **IEEE/ACM Transactions on Computational Biology and Bioinformatics (TCBB)**, Volume 2 Issue 3

Publisher: IEEE Computer Society Press

Recent advances in biology (namely, DNA arrays) allow an unprecedented view of the biochemical mechanisms contained within a cell. However, this technology raises new challenges for computer scientists and biologists alike, as the data created by these arrays is often highly complex. One of the challenges is the elucidation of the regulatory connections and interactions between genes, proteins and other gene products. In this paper, a novel method is described for determining gene interactions I ...

45 A survey on wavelet applications in data mining

Tao Li, Qi Li, Shenghuo Zhu, Mitsunori Ogiwara

December 2002 **ACM SIGKDD Explorations Newsletter**, Volume 4 Issue 2

Publisher: ACM Press

Full text available: [pdf\(330.06 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

Recently there has been significant development in the use of wavelet methods in various data mining processes. However, there has been written no comprehensive survey available on the topic. The goal of this is paper to fill the void. First, the paper presents a high-level data-mining framework that reduces the overall process into smaller components. Then applications of wavelets for each component are reviewed. The paper concludes by discussing the impact of wavelets on data mining research an ...

46 Face recognition: A literature survey

W. Zhao, R. Chellappa, P. J. Phillips, A. Rosenfeld

December 2003 **ACM Computing Surveys (CSUR)**, Volume 35 Issue 4

Publisher: ACM Press

Full text available: [pdf\(4.28 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

As one of the most successful applications of image analysis and understanding, face recognition has recently received significant attention, especially during the past several years. At least two reasons account for this trend: the first is the wide range of commercial and law enforcement applications, and the second is the availability of feasible technologies after 30 years of research. Even though current machine recognition systems have reached a certain level of maturity, their success is ...

One of the daunting challenges of interactive genetic algorithms (iGAs)---genetic algorithms in which fitness measure of a solution is provided by a human rather than by a

fitness function, model, or computation---is user fatigue which leads to sub-optimal solutions. This paper proposes a method to combat user fatigue by augmenting user evaluations with a synthetic fitness function. The proposed method combines partial ordering concepts, notion of non-domination from multiobjective optimization, ...

The field of metaheuristics for the application to combinatorial optimization problems is a rapidly growing field of research. This is due to the importance of combinatorial optimization problems for the scientific as well as the industrial world. We give a survey of the nowadays most important metaheuristics from a conceptual point of view. We outline the different components and concepts that are used in the different metaheuristics in order to analyze their similarities and differences. Two v ...

52 Data stream processing: Adaptive non-linear clustering in data streams

-  Ankur Jain, Zhihua Zhang, Edward Y. Chang
November 2006 **Proceedings of the 15th ACM international conference on Information and knowledge management CIKM '06**

Publisher: ACM Press

Full text available:  pdf(813.29 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Data stream clustering has emerged as a challenging and interesting problem over the past few years. Due to the evolving nature, and one-pass restriction imposed by the data stream model, traditional clustering algorithms are inapplicable for stream clustering. This problem becomes even more challenging when the data is high-dimensional and the clusters are not linearly separable in the input space. In this paper, we propose a nonlinear stream clustering algorithm that adapts to the stream's evolution ...

55 Genetic algorithms: Intelligent exploration for genetic algorithms: using self-organizing maps in evolutionary computation

Heni Ben Amor, Achim Rettinger

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: [pdf\(397.40 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Exploration vs. exploitation is a well known issue in Evolutionary Algorithms. Accordingly, an unbalanced search can lead to premature convergence. GASOM, a novel Genetic Algorithm, addresses this problem by intelligent exploration techniques. The approach uses Self-Organizing Maps to mine data from the evolution process. The information obtained is successfully utilized to enhance the search strategy and confront genetic drift. This way, local optima are avoided and exploratory power is maintained. GASOM successfully uses...

60 Learning classifier systems and other genetics-based machine learning: DXCS: an XCS system for distributed data mining

Hai H. Dam, Hussein A. Abbass, Chris Lokan

June 2005 **Proceedings of the 2005 conference on Genetic and evolutionary computation GECCO '05**

Publisher: ACM Press

Full text available: pdf(481.30 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

XCS is a flexible system for data mining due to its ability to deal with environmental changes, learn online with little prior knowledge and evolve accurate and maximally general classifiers. In this paper, we propose DXCS which is an XCS-based distributed data mining system. A MDL metric is proposed to quantify and analyze network load, and study the balance between network load and classifier accuracy in the presence of noise. The DXCS system shows promising results.
